Science

Skills Progression Years F - 6

Year	Working Scientifically	Living Things	Materials	Physical Processes
F	To show curiosity about objects, events and people.	To comment and asks questions about aspects of their familiar world such as the place where they live or the natural world.	To choose different materials for a particular purpose.	To comment and asks questions about aspects of their familiar world such as the place where they live or the
	To use their senses to explore the world around them.	To talk about some of the things they have	To understand and	natural world.
	To make their own predictions and test their own ideas.	observed such as plants, animals, natural and found objects.	talk about similarities and differences in	To make observations and talk about the features of their own immediate environment and how environments
		To talks about why things happen and how things work.	relation to different materials.	might vary from one another.
		To develop an understanding of growth, decay and changes over time.		
		To shows care and concern for living things and the environment.		
		To make observations of animals and plants and explain why some things occur, and talk about changes.		

Suggest what might happen and ways to test ideas.

Make observations using appropriate senses.

Explore using the five senses.

Make simple comparisons and groupings.

Communicate findings in simple

ways.

Collect evidence to try answer a question

Plants

Identify and name a variety of common wild and garden plants, including deciduous and evergreen trees.

Identify and describe the basic structure of a variety of common flowering plants, including trees.

Animals, Including Humans

Identify and name a variety of common animals including fish, amphibians, reptiles, birds and mammals.

Identify and name a variety of common animals that are carnivores, herbivores and omnivores.

Describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals, including pets). Identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense.

Everyday Materials

Distinguish between an object and the material from which it is made. Identify and name a variety of everyday materials, including wood, plastic, glass,

metal, water, and

rock.

Describe the simple physical properties of a variety of everyday materials. Compare and group together a variety of everyday materials on the basis of their simple physical properties.

Seasonal Changes

Observe changes across the four seasons.

Observe and describe weather associated with the seasons and how day length varies.

				will attract or repel each other,
				depending on which poles are facing.

Year	Working Scientifically	Living Things	Materials	Physical Processes
4	Recognise why it is important to collect data to answer questions. Suggest questions that can be tested. Put forward ideas about testing and make predictions. With help, consider what constitutes a fair test. Make relevant observations and comparisons. Make measurements of temperature, time and force as well as measurements of length. Begin to think about why measurements of length should be repeated. With help, carry out a fair test recognising and explaining why it is fair. Explain why the evidence shows in a scientific way and whether it supports predictions. Suggest improvements in their work.	Animals, including Humans Describe the simple functions of basic parts of the digestive system in humans. Identify the different types of teeth in humans and their simple functions. Construct and interpret a variety of food chains, identifying producers, predators and prey. Living Things and their Habitats Recognise that living things can be grouped in a variety of ways. Explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment. Recognise that environments can change and that this can sometimes pose dangers to living things.	States of Matter Compare and group materials together, according to whether they are solids, liquids or gases. Observe that some materials change state when they are heated or cooled and measure the temperature at which this happens in degrees Celsius. Identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature.	Identify how sounds are made, associating some of them with something vibrating. Recognise that vibrations from sounds travel through a medium to the ear. Find patterns between the volume of a sound and the strength of the vibrations that produced it. Recognise that sounds get fainter as the distance from the sound source increases. Electricity Identify common appliances that run on electricity. Construct a simple series circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers. Identify whether a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery. Recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit. Recognise common conductors / insulators and associate metals with being good conductors.

Year	Working Scientifically	Living Things	Materials	Physical Processes
5	Recognise that scientific ideas are based on evidence and creative thinking. Make predictions based on scientific knowledge. Suggest methods of testing including a fair test. Suggest how to collect evidence. Select suitable equipment. Carry out a fair test explaining why it is fair. Understand why observations and measurements need to be repeated. Select information from provided sources. Identify simple trends and patterns. Communicate findings in a variety of ways including in tables, bar charts and line graphs, whilst making appropriate use of ICT. Identify trends and patterns and offer explanations for these. To draw conclusions and communicate them in appropriate scientific language. Suggest improvements in their work giving reasons.	Animals, including Humans Describe the changes as humans develop to old age. Living Things and their Habitats Describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird. Describe the life process of reproduction in some plants and animals.	Properties and Changes of Materials Compare/group together materials on the basis of their properties, including their hardness, solubility, transparency, conductivity and response to magnets Know that some materials will dissolve in liquid to form a solution and describe how to recover a substance from a solution. Use knowledge of solids, liquids and gases to decide how mixtures might be separated: using filtering, sieving and evaporating. Give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials	Explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object. Identify the effects of air resistance, water resistance, and friction that act between moving surfaces. Recognise that some mechanisms, including levers, pulleys and gears, allow a smaller force to have a greater effect. Earth and Space Describe the movement of the Earth, and other planets, relative to the Sun in the solar system. Describe the movement of the Moon relative to the Earth. Describe the Sun, Earth and Moon as approximately spherical bodies. Use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky.

	Demonstrate that dissolving, mixing and changes of state are reversible changes. Explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda.	

ear Working Scientifically	Living Things	Materials	Physical Processes
Consider how scientists have combined evidence from observation and measurement with creative thinking to suggest new ideas and explanations for phenomena. Make predictions based on scientific knowledge and understanding. Suggest methods of testing including a fair test and how to collect evidence, ensuring it is sufficient and appropriate. Carry out a fair test identifying key factors to be considered. Make a variety of relevant observations and measurements using simple apparatus correctly. Decide when observations and measurements need to be checked, by repeating, to give more reliable data. Select information from a range of sources. Identify simple trends and patterns. Communicate findings in tables, bar charts and line graphs, making appropriate use of ICT. Identify trends and patterns and results that do not appear to fit the pattern. Provide explanations for differences in observations and measurements. Draw conclusions and communicate them in appropriate scientific language. Make practical suggestions for improving	Animals, Including Humans Identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood Recognise the impact of diet, exercise, drugs and lifestyle and the way their bodies function Describe the ways in which nutrients and water are transported within animals including humans Living Things and their Habitats Describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including micro-organisms, plants and animals Give reasons for classifying plants and animals based on specific characteristics Evolution and Inheritance Recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago. Recognise that living things produce offspring of the same kind but normally offspring vary and are not identical to their parents. Identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution.	Materials	Light Recognise that light appears to travel in straight lines. Use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye. Explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes. Use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them. Electricity Associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit. Compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches. Use recognised symbols when representing a simple circuit in a diagram.
