BUNNY RABBIT

Meet **Darius**, the world's biggest bunny rabbit. He measures 4ft long and weights a huge 3 and a half

Annette Edwards, who has been feeding 5 year old Darius 2,000 carrots and 700 apples a year, says 'He is very laid back, its more like having a dog'.

Did you know...

Mickey Mouse was originally a rabbit!

Walt Disney created 'Oswald the Lucky Rabbit' in the 1920's. Walt Disney developed many characters who changed over time and Oswald turned into a mouse called 'Mickey Mouse' - he looks similar even though he's a rabbit.

WHERE IN THE WORLD...

The name "Easter Island" was given by the island's first recorded European visitor, the Dutch explorer Jacob Roggeveen, who encountered it on Easter Sunday in 1722.

2,180 miles west of Chile, Easter Island is one of the worlds most isolated islands with around 6,000 people living there.

The island is about 15.3 miles long by 7.6 miles at its widest point. Its overall shape is triangular. There are three freshwater crater lakes but no permanent streams or rivers. There are 3 volcanoes on the island. Easter Island is a tropical rainforest.

The history of 900 statues is captivating and mysterious, and is what the island is most famous for.

The massive stone structures were created by artists between 110 and 1650. They were made out of volcanic stone. Recent experiments suggest that it would have taken 30 people to move the sculptures into position, and it would have taken 300 people to make the rope and food required.

For hundreds of years only the heads were visible, but in 2012 the first photographs of the hidden bodies emerged when researchers began cleaning and investigating the sculptures.

They discovered the sculptures were much larger than the head and shoulders on the slope of a volcano. It is thought centuries of extreme weather and lava from the volcano erupting caused them to be buried under layers of silt until only the heads remained visible.
